

Week 5

Water change

Task:

Complete this multiple choice quiz

As you have learnt a lot about the water in your aquarium try and answer these questions about the water cycle. The water cycle is the process of water found in lakes, river and puddles being heated and evaporated. The water vapor is then cooled and condensed into clouds. Once cold enough the vapor is turned back into water and comes back down to earth as rain.

What do we call water that is in a solid state?

1. Liquid.
2. Ice.
3. Water vapor.

What do we call rain falling from the sky to the Earth's surface?

1. Condensation
2. Precipitation
3. Evaporation

Which of these is condensation in the atmosphere?

1. Sun
2. Clouds.
3. Lighting.

Puddles on the ground eventually disappear. What has happened to the water?

1. It has precipitated.
2. It has evaporated.
3. It has condensed.

What happens to water vapour when it cools?

1. It condenses
2. It precipitates
3. It evaporates
